IndieCraft Business Analysis Report

Executive summary

- **₹20,775 of sales turned into ₹14,534 of profit, a 70% margin.** The average order earns ₹184 profit (the typical order earns ₹119) and each unit earns about ₹76. Product costs are 31% of sales (₹6,529).
- **Charms are the most profitable per unit.** Keychains & Charms earn ₹98 profit per unit at an 84% margin. They made as much profit as the whole Bloom Series (about ₹2.9k each) from 30 units instead of 111.
- **Bags still carry the money.** Bags are 5% of units but 42% of product profit (₹5,958), and ₹3,889 of that came from one customer.
- **Profit depends on a few customers.** The top customer is 34% of total profit, the top 3 are 55% and the top 5 are 64%.
- **The high-volume Bloom items earn very little each.** Pure Petal and Sun Kissed Bloom have margins of 54–55%, about ₹18 profit per unit.
- **Discounts cost ₹1,058,** which is about 6.8% of profit before discounts. Discounted orders earn about a 62% margin versus 73% without a discount.
- **A ₹100 delivery fee covers the real cost every time** (real cost ₹47–₹90, average ₹64), leaving ₹288 extra across the 9 deliveries. But 70 of 79 orders had no delivery fee and no cost recorded.
- **There are still no invoices after 1 Sep 2026.** Please confirm whether sales paused or invoices are missing.

Scorecard

Metric	Value
Sales revenue (delivered orders, excl. delivery)	₹20,775
Product cost	₹6,529 (31% of sales)
Product profit	₹14,246
Delivery charged / real courier cost / extra (9 deliveries)	₹860 / ₹572 / ₹288

Metric	Value
Total profit	**₹14,534 (70% of sales)**
Orders / units sold	79 / 191
Average order sales / typical (median)	₹263 / ₹125
Average profit per order / typical (median)	₹184 / ₹119
Customers	46 (11 repeat customers, who bring 71% of profit)
Discounts given	₹1,058 on 16 orders

1. Where the profit comes from

Category	Units	Sales (₹)	Profit (₹)	Margin	Profit per unit (₹)	Share of product profit
Bags & Totes	10	9,227	5,958	65%	596	42%
Bloom Series	111	4,698	2,948	63%	27	21%
Keychains & Charms	30	3,522	2,942	84%	98	21%
Hair & Fashion Accessories	34	2,159	1,604	74%	47	11%
Home Decor	1	769	494	64%	494	3%
Jewellery	3	300	230	77%	77	2%
Unspecified	2	100	70	70%	35	under 1%

Categories are my grouping by product name. Profit here is product profit only (delivery extra is not included).

- **The profit mix has shifted.** In Jan–Mar, bags were 48% and Bloom items 35% of product profit. Since June, Keychains & Charms are 80% of it.
- **Top 10 products by profit:**

Product	Units	Sales (₹)	Profit (₹)	Margin
Lustra Pearl Bag	4	5,009	3,209	64%

Product	Units	Sales (₹)	Profit (₹)	Margin
Pearl Bead Bag	2	1,999	1,365	68%
Lavender Loop	40	1,782	1,182	66%
Ivory Pearl Bag	1	1,200	865	72%
Virat Cricket Charm	12	990	810	82%
Bal Ganesha Keychain	3	850	760	89%
The Bloom Collection	25	1,050	675	64%
Hangin' Spidey	4	700	600	86%
Bloom Chakra Toran	1	769	494	64%
Rosy Twist	8	629	469	75%

- **The top 3 products are 40% of product profit and the top 5 are 52%.**
- **Lowest margins:** Lustreline Choker 20% (sold at ₹50, but the Price List says ₹150 and it costs ₹40), MiraPearl Mini 44%, Red Blossom 48%, Huggy Panda Tote 50%. These were all one-off sales.
- **Customization is as profitable as standard items** (66% margin, 42 units, ₹1,232 profit) but is priced at ₹50 like the standard version, and your time is not counted.
- **Sold below today's list price:** 23 invoice lines (27 units) were sold below the current Price List, about ₹1,539 of lost price before discounts. ₹901 of that is three Lustra Pearl Bags sold at ₹1,199–₹1,200 against ₹1,500 now.

2. Monthly trend

Month	Orders delivered	Sales (₹)	Profit (₹)
Sep 2025	1	1,109	659
Oct 2025	1	999	682
Nov 2025	1	269	119
Dec 2025	0	0	0
Jan 2026	14	2,249	1,439

Month	Orders delivered	Sales (₹)	Profit (₹)
Feb 2026	15	6,900	4,398
Mar 2026	10	1,999	1,299
Apr 2026	9	1,265	925
May 2026	3	1,590	1,145
Jun 2026	6	880	655
Jul 2026	13	1,740	1,708
Aug 2026	5	1,675	1,420
Sep 2026	1	100	85

Profit includes the delivery extra, which is why July profit is close to July sales.

- **Jan–Mar made 49% of all profit.** February's ₹4,398 includes about ₹2,300 from a single ₹3,400 bag order.
- **Jan–Aug averaged about ₹1,600 profit a month.**
- **July's rebound came from new customers and charms.** Of 19 orders from July onward, only 6 were from earlier customers.
- **Most orders are small.** The typical order is ₹125 in sales. 66% of invoices have one product line.

3. Customers

- **Profit concentration:** Sharmishtha Jagtap ₹4,954 (34% of profit, 11 orders, 67% margin), Chaitali Karjekar ₹1,865 (13%, 12 orders), Savali Parte ₹1,175 (8%, 2 orders). Pramila Sawant (₹750) and Sayali Sakpal (₹605) each came in one big order.
- **Two repeat patterns:** Sharmishtha is a high-ticket buyer (mainly bags). Chaitali is a frequent small-ticket buyer who also receives most discounts.
- **Retention is the weak spot.** 35 of 46 customers bought once. The 11 repeat customers bring 71% of profit.
- **Repeat orders come quickly or not at all.** The median gap between a repeat customer's orders is 14 days.
- **First-order month retention:** Jan 36% came back, Feb 29%, Mar 14%. The 9 July customers have not returned yet.

4. Pricing and discounts

- **Discounts cost ₹1,058 over 16 orders.** That is about 6.8% of profit before discounts.
- **One customer takes most of it.** Chaitali Karjekar received 12 of the 16 discounted orders (₹589). She still earned ₹1,865 profit at a 66% margin.
- **There is no visible discount rule.** Percentages range from 6.25% to 23% and totals land on round numbers, which suggests discounts are set to hit a target price.
- **Prices for the same product vary:** Lustra Pearl Bag ₹1,199 → ₹1,200 → ₹1,500; Bal Ganesha keychain ₹200 / ₹300 / ₹350; Flora Bloom and Pastel Petal Clip ₹30 / ₹40 / ₹50. Invoices do not record size or variant, so intentional price rises cannot be told apart from different versions.

5. Delivery

- **Fee versus real cost:** 9 deliveries had a fee (₹860). The real courier cost was ₹572 (range ₹47–₹90, average ₹64). The extra is ₹288, about ₹32 per delivery.
- **Outstation orders:** 8 orders, with 6 on 7 July. Their profit averaged about ₹140 per order, against ₹189 for local orders, because they were mostly single ₹85 charms. A ₹85 charm costs ₹185 delivered.
- **A gap in the data:** 70 of 79 orders had no delivery fee, and their delivery cost was not recorded. If any of them were couriered, profit is overstated.

Risks

1. **Profit concentration.** One customer is 34% of profit and most of the bag business.
2. **The best-selling items earn the least.** Pure Petal and Sun Kissed Bloom (33 units) earned ₹595 in total.
3. **Price inconsistency.** Items sold below list price and a 20% margin on one choker.
4. **Profit is overstated.** Labour, packaging, ads and free-delivery costs are not counted.
5. **No stock visibility.** You cannot see what is made, sold, reserved or left (see the roadmap below).
6. **Possible data gap.** No invoices after 1 Sep 2026.

Recommendations

1. **Confirm and load any invoices after 1 Sep 2026** so the Dashboard reflects the current position.
2. **Lean into charms.** They have the best profit per unit (₹98) and the highest margins (Bal Ganesha 89%, Spidey 86%, Virat 82%). Add new characters and test 3-charm bundles.
3. **Fix the thin Bloom items.** Pure Petal and Sun Kissed Bloom earn about ₹18 a unit at ₹50. Test ₹60 or sell them in packs. Consider a small customization fee (₹10 on 42 units would add about ₹420).
4. **Hold your list prices.** Check the Lustreline Choker (₹50 against ₹150 list) and set a rule such as never selling below cost plus 50%.
5. **Make discounts follow the margin.** Bloom items and charms can afford 20% off and stay near a 60% margin. Bags should get smaller discounts. Review discounts monthly against profit.
6. **Keep the ₹100 outstation fee.** It covers the highest real cost (₹90). Offer a bundle or minimum order so a single ₹85 charm does not carry ₹100 delivery. Record the real cost of every delivery, including free ones.
7. **Follow up repeat buyers about 2 weeks after each order,** starting with the July–August customers who have not come back.
8. **Record packaging, labour time and ad spend** so the report shows true net profit.

Product roadmap

1. Inventory & Stock Management recommendation

The system currently records invoices, payments, refunds, deliveries and reports, but not stock. Adding inventory would show, for each product:

- **Made:** how many were made.
- **Sold:** filled in automatically from delivered invoices.
- **Available:** made minus sold, minus damaged, plus returned.
- **Reserved:** units on orders that are still being made or are waiting for delivery.
- **Returned and damaged products.**
- **Low-stock and out-of-stock alerts** against a reorder level for each product.

Your example: 20 Pearl Bead Bags made and 12 sold shows 8 remaining, and if 3 of those are reserved for pending orders, 5 are free to sell.

Why the data says it is worth building:

- **Bags tie up real money.** A batch of 20 Pearl Bead Bags costs ₹6,340, about the same as all the product cost sold in the last 12 months (₹6,529). Only 2 Pearl Bead Bags sold in that time, so batch size matters a great deal.
- **Charms are low risk.** They cost ₹15–₹30 each, so stock mistakes are cheap.
- **Demand comes in waves,** so reorder levels should use the last 4–8 weeks of sales, not lifetime sales. The Bloom Collection sold 25 units, all in January. Pure Petal sold 19 in Jan–Feb and none since March. Virat charms sold 12 in Jun–Aug, about 4 a month.
- **Slow movers can be spotted.** 19 of 37 products sold 2 units or fewer, and only 5 products sold 10 or more (58% of all units). A stock report would flag items with no sales in 60 days.

How it would fit the current workbook:

- **Price List:** add Stock on hand and Reorder level columns.
- **Stock In log and Damaged/Returned log:** a new sheet or two for recording new batches and problems.
- **Buttons:** Add Stock and Record Damage/Return, next to the existing ones.
- **Reserved stock:** orders with status Making or Ready reserve stock, and cancelling an order releases it.
- **Dashboard and Products sheet:** Low-stock items, Out-of-stock items, Stock value at cost, and days of stock left.

Suggested way to start:

- **Count what you hold now** (opening stock).
- **Phase 1:** track only ready-made standard items, starting with all bags and the top movers (Virat charm, Lavender Loop, Rosy Twist, Sunshine Bloom Clip, Cotton Candy Bow, Hangin′ Spidey). Customized items (42 units) are made to order and should not be stocked.
- **Phase 2:** the remaining products.
- **Phase 3:** raw materials such as beads and yarn.

2. Customer follow-up list

A list of customers who are due a nudge about 14 days after their last order, using the phone numbers the invoice form now fills in, with a ready WhatsApp message link.

3. Expenses and true net profit

A simple expenses sheet (packaging, ads, courier for free deliveries, labour) so the Dashboard can show net profit after all costs.

4. Margin guard on the invoice form

A warning when an item is priced below the Price List or when an order's margin falls under a limit you set (for example 60%).

Notes on the data

- **Costs:** unit costs come from your Product_cost sheet. Each invoice line keeps its own cost, so later cost changes do not alter past profit. Courier costs come from your Delivery_charges sheet (9 invoices).
- **Sales:** totals match the invoices as printed. IC-26-0025, 0026 and 0027 had totals lower than quantity × price, and IC-26-0073 had delivery printed but not charged. These are documented in the workbook.
- **Customers** are matched by exact name. "Sakshi Patil" appears with two addresses and may be two people.
- **Categories** are my grouping and are not on the invoices.
- **Profit shown is before** labour, packaging, advertising, rent and any cost of free deliveries.
